Profile

Second-year Computer Engineering student at ENSA Oujda, passionate about web development and software engineering. Experienced in designing desktop and web applications using Java, PHP, and Python. I combine rigor, curiosity, and creativity to solve technical problems and develop innovative solutions.

Education

El Mourabitine High School

Baccalaureate in Physical Sciences – French Option

Honors: Very Good

Outat El Haj

Sept 2021 – Jul 2022

ENSA Oujda

Engineering Degree in Computer Engineering

Main courses: Data Structures, OOP, Web Development, Machine Learning, Operating Systems.

Oujda

Sept 2022 – Jul 2027

Technical Skills

Proficient Languages: Java, Python, PHP, JavaScript

Familiar Languages: C, C++, C#

Web: HTML5, CSS3, JavaScript

Frameworks & Libraries: Symfony, React (learning)

Tools: Git/GitHub, VS Code, NetBeans, Eclipse, WampServer

Databases: MySQL, SQLite

Professional Experience

Maison d'Intelligence Artificielle (MIA)

Web Development Intern

Oujda

Jul 2025 – Sept 2025

Project: Innomiate — Web platform for managing registrations for Miathon hackathons.

- Designed the complete database and contributed to the system architecture to ensure efficient storage and high performance.
- Built the UI/UX design to provide a modern, ergonomic, and user-friendly interface.
- Developed a secure authentication system including registration, login with CAPTCHA, and email verification using **Symfony**.
- Implemented major functional modules: team creation and management, member tracking, invitations, and project pitching system.
- Integrated customizable themes to offer an adaptable and pleasant user interface.

XAI-TECH

Software Engineering Intern

Remote

Aug 2025 – Oct 2025

Project: X-Docs — Web application that transforms documents into an AI-powered chatbot able to answer user questions.

- Conducted market research and competitor analysis to identify essential features.
- Designed detailed UML diagrams to structure the system architecture.
- Used AI-based tools to create functional prototypes (MVPs) such as V0 and Lovable for rapid concept testing and iteration.

Academic & Personal Projects

Personal Budget Manager

Java, JavaFX, CSS, File I/O

- Developed a desktop application with a modern and interactive UI allowing users to record, update, delete, and view transactions.
- Integrated dynamic charts to visualize expenses by category in real time.
- Implemented complete CRUD operations with secure local storage.

School Marks Management System

HTML, CSS, PHP, MySQL

- Developed a secure web application to manage student grades (add/edit/delete).
- Implemented session-based authentication to protect sensitive data.
- Designed and optimized a structured MySQL database.
- Built a responsive and user-friendly interface compatible across devices.

CBIR – Content-Based Image Retrieval

Python, NumPy, OpenCV, Tkinter

- Developed a graphical interface to load query images and configure retrieval parameters.
- Displayed visually the most similar images retrieved based on relevance.
- Performed advanced testing by varying histogram bins (8, 16, 32) and color spaces (RGB, HSV, Lab).
- Analyzed metrics such as Histogram Intersection, Euclidean Distance, Chi-Square, and Correlation to determine optimal configurations.

Activities & Clubs

Path2Tech — Computer Engineering Club

Team Leader

Oct 2024 – June 2025

- Led a team of 10+ members to design and publish IT career roadmaps.
- Raised awareness among students about diverse paths in the tech industry.

Languages

Arabic: Native

French: B2 — Upper Intermediate

English: C1 — Advanced
